AURAS - 4

PRINCIPAL'S COMMUNIQUE

The function of education is to teach one to think intensively and to think critically. Intelligence plus character - that is the goal of true education

DIVERSE ROLE OF A TEACHER

The role of the teachers has changed immensely with the introduction of digital media. A teacher was seen as a lecturer some on who deliver knowledge to conducted tests. A teacher was perceived as someone who had answers to every possible question, a gate keeper of all the resources and information too. But this was all before of the introduction of the internet or digital media. Information is now easy to access. The ocean of data is before us with just a few keys strokes away. The new age -technology like artificial intelligence, augmented reality are opening a new dimension in education. Teachers are no more seen as the only keeper of information. Information is already shared and students have chewed and digested them. There is a gap between the information and knowledge, real education. Teachers can gear up to help students to understand knowledge and concepts outside the textbooks along with this the teachers has to give career counselling, enhance their problem solving skills, there are there to build up a bunch of creative, independent, informed, incisive, innovative individual who can contribute to the society and for a better next generation.

"Better than a thousand days of diligent study is one day with a great teacher."
